

# SUMMARY SHEET

# breathAplasta™

9kg bags

Coverage:  
1 SQM at 20mm  
thickness

## PROFILE

### Insulating plaster

A versatile multi-coat plaster to thermally insulate solid wall properties to reduce heating demand and improve comfort.

### Insulating plaster that's fast and easy to apply

Quick setting time per coat allows for faster completions. Apply 40mm per pass and up to 80mm per day. Setting time per coat is just 2 hours.

### Alternative IWI system for solid wall properties

Easy wet applied thermally insulating plaster system for all building types, especially well suited to older solid wall properties. Plaster systems prevent air gaps that may be seen in solid internal wall insulation (IWI).

## Fast Setting Insulation Plaster

**Mix**  
Water required

**Apply**  
Coats minimum

**Set**  
Setting time

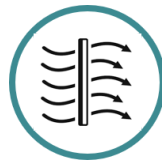

**Finish**  
Apply fine lime finishing plaster

**Quick setting and easy to use**  
Saves time and labour on installation.  
Sets in just 2 hours per coat.

**Thermal wall insulation**  
Improves U-value of solid walls.  
100% 'natural' lightweight insulating plaster

**Breathable lime plaster**  
Water vapour permeable.  
Ideal renovating plaster for older buildings.

**Awaiting final testing for thermal conductivity.**  
**Indicative results = within band 0.07 - 0.09 W/mk**
